

Purpose

This document provides you with key information about this investment product. It is not marketing material. The information is required by law to help you understand the nature, risks, costs, potential gains and losses of this product and to help you compare it with other products.

Product

Spread bets on an FX pair are offered by **StoneX Financial Ltd** (“SFL”, “we” or “us”), a company registered in England and Wales with registration number 05616586. City Index is a trading name of StoneX Financial Ltd which is authorised and regulated by the Financial Conduct Authority in the United Kingdom with reference number 446717. Call [0845 355 0801](tel:08453550801) or go to www.cityindex.co.uk for more information.

This document was last updated on 20 January 2022.

You are about to purchase a product that is not simple and may be difficult to understand.

What is this product?

Type

A spread bet (“SB”) is a leveraged contract entered into with SFL on a bilateral basis. It allows an investor to speculate on rising or falling prices in an underlying FX pair.

FX is always traded in currency pairs (e.g., EUR/GBP) and involves the simultaneous buying and selling of two different currencies. The first currency referenced in a currency pair (in the example, EUR) is known as the base currency and the second (in the example, GBP) is known as the quote or variable currency. The price of the SB is derived from the price of the underlying FX pair, which may reference either the current (“spot”) price or a forward (“future”) price. FX trading gives an investor the choice to buy (or go “long”) the currency pair if they think the price of the base currency will rise in relation to the quote currency, or alternatively to sell (or go “short”) if they think that the price of the quote currency will rise in relation to the base currency. For instance, if an investor is long on EUR/GBP SB and the price of the underlying FX pair rises, the value of the SB will increase - at the end of the contract SFL will pay the difference between the closing value of the contract and the opening value of the contract. Conversely, if an investor is long and the spot price of the underlying FX pair falls, the value of the SB will decrease - at the end of the contract the investor will pay SFL the difference between the closing value of the contract and the opening value of the contract. An SB referencing a futures price works in exactly the same way except that such contracts have a pre-defined expiry date – a date upon which the contract either automatically terminates or must be rolled into the next expiration period. The leverage embedded within all SBs has the effect of magnifying both profits and losses.

Objectives

The objective of the SB is to allow an investor to gain leveraged exposure to the movement in the value of the underlying FX pair (whether up or down), without actually needing to buy or sell the underlying FX pair. The exposure is leveraged since the SB only requires a proportion of the notional value of the contract to be paid up front as initial margin and is one of the key features of trading SBs. By way of example, if EUR/GBP is trading at 0.84950 / 0.84960 and an investor buys an SB of £5 per point with an initial margin amount of 3% and a bid price of 0.84950, the initial investment will be £1274.25 ($3\% \times 5 / 0.0001 \times 0.84950$). The effect of leverage, in this case 30:1 (1 / 3%), means that for each 1 point change in the price of the underlying FX pair (1 point being a change in the fourth decimal place), the value of the SB changes by £5. For instance, if the investor is long and the market increases in value, a £5 profit will be made for every 1 point increase in that market. However, if the market decreases in value, a £5 loss will be incurred for each point the market decreases in value. Conversely, if an investor holds a short position, a profit is made in line with any decreases in that market, and a loss for any increases in the market.

An SB on the spot price of an FX pair does not have a pre-defined maturity date and is therefore open-ended; by contrast, an SB on an FX pair futures price has a pre-defined expiry date, which is the expiration date of the relevant FX future. As a result, there is no recommended holding period for either and it is down to the discretion of each individual investor to determine the most appropriate holding period based on their own individual trading strategy and objectives.

Failure to deposit additional funds in order to meet the margin requirement as a result of negative price movement may result in the SB being automatically terminated by SFL. This will occur when losses exceed the initial margin amount. In the case of SBs on FX futures prices, investors will be given the option to roll their existing contract into

the next expiration period – e.g., from a January expiry into a February expiry. Rolling is at the discretion of the investor but failure to do so will result in the future SB being automatically terminated by SFL at the expiry date.

SFL also retains the ability to unilaterally terminate any SB contract and any of your other open positions where certain events of default have occurred with respect to you (e.g., failing to maintain sufficient margin in your account).

Intended Retail Investor

SBs are intended for investors who have knowledge of, or are experienced with, leveraged products and who are looking to gain a short-term exposure to foreign exchange markets. Likely investors will understand how the prices of SBs are derived and the key concepts of margin and leverage. Indeed, they will understand the risk/reward profile of the product compared to trading directly in the underlying FX pair. Investors will also have appropriate financial means and the ability to bear losses.

What are the risks and what could I get in return?

Risk indicator

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

We have classified this product as 7 out of 7, which is the highest risk class. This rates the potential losses from future performance of the product at a very high level.

SBs are leveraged products that, due to underlying market movement, can generate losses rapidly. There is no capital protection against market risk, credit risk or liquidity risk. Even though losses may be incurred, Retail clients are subject to negative balance protection which means that your losses cannot exceed the funds in your account (which includes any funds that are not required to be maintained as margin to keep your positions open).

Be aware of currency risk. It is possible to buy or sell SBs that are denominated in a currency that is different to the base currency of your account. The final return you may get depends on the exchange rate between the two currencies. This risk is not considered in the indicator shown above.

Market conditions may mean that your SB is closed at a less favourable price, which could significantly impact how much you get back. We may close your open SB positions if you do not maintain the minimum margin that is required, if you are in debt to SFL, or if you contravene market regulations. This process may be automated.

This product does not include any protection from future market performance so you could lose some or all of your investment. If we are not able to pay you what is owed, you could lose your entire investment. However, you may benefit from a consumer protection scheme (see the section “what happens if we are unable to pay you”). The indicator shown above does not consider this protection.

Performance scenarios

The scenarios shown illustrate how your investment could perform. You can compare them with the scenarios of other products. The scenarios presented are an estimate of future performance based on evidence from the past on how the value of this investment varies and are not an exact indicator. What you get will vary depending on how the relevant market performs and how long you hold the SB. The stress scenario shows what you might get back in extreme market circumstances, and it does not take into account the situation where we are not able to pay you.

The following assumptions have been used to create the scenarios in Table 1:

FX pair SB (held intraday)		
FX pair opening price:	P	0.84955
Trade size (per point):	TS	5
Margin %:	M	3%
Margin Requirement (£):	$MR = P \times TS \times M$	£1274.33
Notional value of the trade (£):	$TN = MR/M$	£42,478

Table 1

LONG Performance scenario	Closing price (inc. spread)	Price change	Profit/loss	SHORT Performance scenario	Closing price (inc. spread)	Price change	Profit/loss
Favourable	0.86229	1.5%	£637	Favourable	0.83681	-1.5%	£637
Moderate	0.85380	0.5%	£212	Moderate	0.84530	-0.5%	£212
Unfavourable	0.83681	-1.5%	-£637	Unfavourable	0.86229	1.5%	-£637
Stress	0.80707	-5.0%	-£2124	Stress	0.89203	5.0%	-£2124

The figures shown include all the costs of the product itself. If you have been sold this product by someone else or have a third party advising you about this product, these figures do not include any cost that you pay to them. The figures do not take into account your personal tax situation, which may also affect how much you get back.

What happens if SFL is unable to pay out?

If SFL is unable to meet its financial obligations to you, you may lose the value of your investment. However, SFL segregates all retail client funds from its own money in accordance with the UK FCA's Client Asset rules. SFL also participates in the UK's Financial Services Compensation Scheme (FSCS) which covers eligible investments up to £85,000 per person, per firm. See www.fscs.org.uk

What are the costs?

Trading an SB on an underlying FX pair incurs the following costs:

This table shows the different types of cost categories and their meaning			
Cash and futures	One-off entry or exit costs	Spread	The difference between the buy price and the sell price is called the spread. This cost is realised each time you open and close a trade.
		Currency conversion	Any cash, realised profit and losses, adjustments, fees and charges that are denominated in a currency other than the base currency of your account, will be converted to the base currency of your account and a currency conversion fee will be charged to your account.
Cash only	Ongoing costs	Daily holding cost	A fee is charged to your account for each night that your position is held. This means the longer you hold a position, the more it will cost.
Cash and futures	Incidental costs	Distributor fee	We may from time to time share a proportion of our spread, commissions and other account fees with other persons including a distributor that may have introduced you.
Futures only	Other costs	Rollover costs	We charge you to roll over a futures contract into the next month or quarter, equal to half the applicable spread to open and close a trade.

How long should I hold it and can I take money out early?

SBs are intended for short-term trading, in some cases intraday, and are generally not suitable for long-term investments. There is no recommended holding period, no cancellation period and therefore no cancellation fees. You can open and close an SB on an FX pair at any time during market hours.

How can I complain?

If you wish to make a complaint, you should contact our Client Management Team on [0845 355 0801](tel:08453550801), by emailing support@cityindex.co.uk or in writing to StoneX Financial Ltd, Devon House, 58 St Katherine's Way London, E1W 1JP. If you do not feel that your complaint has been resolved satisfactorily, you are able to refer your complaint to the Financial Ombudsman Service ("FOS"). See www.financial-ombudsman.org.uk for further information.

You can also refer to the European Commission's Online Dispute Resolution Platform, however it is likely that you will be referred to the FOS.

Other relevant information

If there is a time lag between the time you place your order and the moment it is executed, your order may not be executed at the price you expected. Ensure your internet signal strength is sufficient before trading.

The [Terms and Policies section](#) of the City Index website contains important information regarding your account. You should ensure that you are familiar with all the terms and policies that apply to your account.

The Market Information Sheets contain additional information on trading an SB on an underlying FX pair. These can be found on the trading platform.

For retail clients, a mandatory margin close-out rule is applied on an account level basis. This means that when the value of your account (i.e., the net profit and loss, any deposited margin and any other funds) falls below 50% of the initial margin requirement (that was paid to enter into all of the open CFD and/or spread bet positions at any point in time), one or more of your CFD and/or spread bet positions will be closed out. We may set a higher percentage than 50%.

Retail clients who trade leveraged CFDs and spread bets have the benefit of negative account balance protection. Where this is the case, your liability will be limited to the funds in your account (which includes any funds that are not required to be maintained as margin to keep your positions open, regardless of whether those positions relate to this product).

Spread bets are complex instruments and come with a high risk of losing money rapidly due to leverage. **73% of retail investor accounts lose money when trading spread bets with City Index.** You should consider whether you understand how spread bets work and whether you can afford to take the high risk of losing your money.
